

## **BOWLING IN A NEW LIGHT**

**VPS Bowling** started delivering Luxor fluorescent furniture to the Russian market. Before that, major bowling centers used either standard sports furniture, or expensive analogues made to special order.

Meanwhile, almost 85% European bowling facilities are equipped with the furniture of this famous Italian mark. Its production involves only qualitative composite durable plastics.

Four types of Luxor, differing in their color, will be sold in Russia. The wide model line includes best-seller – the table with four rotating armchairs. It is aimed at people that are not all about the playing bowling, but spending time in leisurely atmosphere. The main distinguishing feature of the collection is that all items glow, and in the glow mode a picture is projected on the table-board. As the **VPS Bowling** commercial director, Anatoly Skrylnik, says, the logistics expenses won't affect the price of this novelty.
